

# Back-end developer

## About us

We specialise in service robotics. With our universal robot operating system, ZBOS, we are the worldwide leader in consumer targeted robot software. Our main office in Oostende, Belgium currently employs 35 people with a broad set of skills. We are currently looking to expand our team.

## Your job profile

You maintain and improve our cloud and internal web applications. You design, build and document future-proof and secure APIs. Also, you can integrate with external APIs and services without breaking a sweat.

You are a team-player, who does everything possible to deliver. You think outside the box and product-focussed. You test your own work vigorously before calling it "Done", you take the responsibility for your work very serious.

## Skill requirements

- Strong knowledge of web technology (Javascript, CSS3, HTML5, HTTP, SSL)
- Implementation experience with Django (or comparable) based backend web applications
- Experience with Angular or AngularJS-based applications
- Good knowledge of Linux system administration
- You are an experienced GIT user
- Experience with accessing and managing databases

## Technologies

The products you will work on use the following technologies:

- Apache / Nginx
- Python, Django
- Docker / k8s
- CI / CD (Atlassian Bamboo)

## Application

Please send your application with CV and motivation letter to Christophe Michiels:
